

COUNTRY INDICATORS AND SDGS

TOTAL ENERGY SUPPLY (TES)

Total Energy Supply (TES)	2014	2019
Non-renewable (TJ)	69 011	52 213
Renewable (TJ)	41 999	39 638
Total (TJ)	111 010	91 851
Renewable share (%)	38	43

Growth in TES	2014-19	2018-19
Non-renewable (%)	-24.3	+1.1
Renewable (%)	-5.6	+45.8
Total (%)	-17.3	+16.5

Primary energy trade	2014	2019
Imports (TJ)	86 298	63 589
Exports (TJ)	49 459	37 168
Net trade (TJ)	- 36 839	- 26 421

Imports (% of supply)	78	69
Exports (% of production)	56	52
Energy self-sufficiency (%)	80	78

Total energy supply in 2019

Renewable energy supply in 2019

RENEWABLE ENERGY CONSUMPTION (TFEC)

Renewable TFEC trend

Consumption by sector	2014	2019
Industry (TJ)	6 644	5 403
Transport (TJ)	1 067	4 784
Households (TJ)	21 785	16 906
Other (TJ)	7 937	7 828

Renewable energy consumption in 2019

ELECTRICITY CAPACITY

Installed capacity trend

Renewable capacity in 2021

Net capacity change (GW)

Net capacity change in 2021 (MW)

Capacity utilisation in 2020 (%)

ELECTRICITY GENERATION

Generation in 2020	GWh	%
Non-renewable	0	0
Renewable	5 313	100
Hydro and marine	5 281	99
Solar	32	1
Wind	0	0
Bioenergy	0	0
Geothermal	0	0
Total	5 313	100

LATEST POLICIES, PROGRAMMES AND LEGISLATION

- 1 Albania First Solar PV Auction (July 2018) 2018
- 2 Order IET/1882/2014 of 14 October. Electricity generated by means of non-renewable fuels in STE and hybrid installations 2014
- 3 Memorandum of Understanding with Brazil 2012
- 4 Albanian Law of Energy Efficiency 2005 2005
- 5 Albanian National Strategy of Energy 2003

ENERGY AND EMISSIONS

Avoided emissions based on fossil fuel mix used for power

Calculated by dividing power sector emissions by elec. + heat gen.

Distribution of solar potential

Distribution of wind potential

Biomass potential: net primary production

Indicators of renewable resource potential

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

Onshore wind: Potential wind power density (W/m²) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

Biomass: Net primary production (NPP) is the amount of carbon fixed by plants and accumulated as biomass each year. It is a basic measure of biomass productivity. The chart shows the average NPP in the country (tC/ha/yr), compared to the global average NPP of 3-4 tonnes of carbon

Sources: IRENA statistics, plus data from the following sources: UN SDG Database (original sources: WHO; World Bank; IEA; IRENA; and UNSD); UN World Population Prospects; UNSD Energy Balances; UN COMTRADE; World Bank World Development Indicators; EDGAR; REN21 Global Status Report; IEA-IRENA Joint Policies and Measures Database; IRENA Global Atlas; and World Bank Global Solar Atlas and Global Wind Atlas.

Additional notes: Capacity per capita and public investments SDGs only apply to developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided emissions from renewable power is calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries and years where no fossil fuel generation occurs, an average fossil fuel emission factor has been used to calculate the avoided emissions.

These profiles have been produced to provide an overview of developments in renewable energy in different countries and areas. The IRENA statistics team would welcome comments and feedback on its structure and content, which can be sent to statistics@irena.org.
