

# Malaysia

## Sustainable Development Goal 7.2: Energy Indicators (2016)

Renewable energy (% of TFEC)	6.2	Access to electricity (% of population)	100.0
Energy efficiency (MJ per \$1 of GDP)	4.7	Access to clean cooking (% of population)	>95

### TOTAL PRIMARY ENERGY SUPPLY (TPES)

TPES	2011	2016
Non-renewable (TJ)	2 999 488	3 405 656
Renewable (TJ)	73 637	128 140
<b>Total (TJ)</b>	<b>3 073 125</b>	<b>3 533 796</b>
Renewable share (%)	2	4

Growth in TPES	2011-16	2015-16
Non-renewable (%)	+13.5	+2.4
Renewable (%)	+74.0	+4.0
<b>Total (%)</b>	<b>+15.0</b>	<b>+2.5</b>

Primary energy trade	2011	2016
Imports (TJ)	1 732 106	2 070 530
Exports (TJ)	1 920 063	2 265 507
Net trade (TJ)	187 957	194 977
Imports (% of supply)	56	59
Exports (% of production)	56	60
Energy self-sufficiency (%)	111	107
Net trade (USD million)	+ 18 221	+ 9 173
Net trade (% of GDP)	+6.1	+3.0

Total primary energy supply in 2016

Renewable energy supply in 2016

### RENEWABLE ENERGY CONSUMPTION

Consumption by source	2011	2016
Electricity (TJ)	33 169	76 301
Direct bioenergy (TJ)	25 166	37 646
Direct solar+geothermal (TJ)	0	0
<b>Total (TJ)</b>	<b>58 335</b>	<b>113 947</b>
Electricity share (%)	57	67

Consumption growth	2011-16	2015-16
Renewable electricity (%)	+130.0	+9.0
Other renewables (%)	+49.6	+3.2
<b>Total (%)</b>	<b>+95.3</b>	<b>+7.0</b>

Consumption by sector	2011	2016
Industry (TJ)	15 107	38 241
Transport (TJ)	912	14 274
Households (TJ)	30 683	37 501
Other (TJ)	11 633	23 931
Renewable share of TFEC	4.1	6.2

Renewable energy consumption in 2016

## ELECTRICITY CAPACITY AND GENERATION

Capacity in 2018	MW	%
<b>Non-renewable</b>	<b>25 725</b>	<b>77</b>
<b>Renewable</b>	<b>7 540</b>	<b>23</b>
Hydro/marine	6 165	19
Solar	536	2
Wind	0	0
Bioenergy	839	3
Geothermal	0	0
<b>Total</b>	<b>33 265</b>	<b>100</b>

Capacity change (%)	2013-18	2017-18
<b>Non-renewable</b>	<b>+ 4</b>	<b>0.0</b>
<b>Renewable</b>	<b>+ 33</b>	<b>+ 2.8</b>
Hydro/marine	+ 36	+ 0.3
Solar	+ 452	+ 44.8
Wind	0	0.0
Bioenergy	- 20	+ 2.7
Geothermal	0	0.0
<b>Total</b>	<b>+ 9</b>	<b>+ 0.6</b>

### Net capacity change in 2018 (MW)

Generation in 2017	GWh	%
<b>Non-renewable</b>	<b>142 235</b>	<b>86</b>
<b>Renewable</b>	<b>23 034</b>	<b>14</b>
Hydro and marine	21 895	13
Solar	333	0
Wind	0	0
Bioenergy	806	0
Geothermal	0	0
<b>Total</b>	<b>165 269</b>	<b>100</b>

### Per capita electricity generation (kWh)

### Renewable capacity in 2018

### Net capacity change (MW)

### Capacity utilisation in 2017 (%)

### Renewable generation (GWh)

## TARGETS, POLICIES AND MEASURES

### Most immediate clean energy targets & NDCs

	year	target	unit
<b>Renewable energy:</b>			
Renewable electricity:	2015	975	MW
Renewable capacity:			
Renewable transport:			
Liquid Biofuel blending mandate:			
Other transport targets:			
Renewable heating/cooling:			
Renewable Hydropower			
Off-grid renewable technologies:			
Energy efficiency (Energy):			
Energy efficiency (Electricity):	2025	8	%

### Latest policies, programmes and legislation

1	Renewable Energy Act establishing feed-in tariff (FIT) system	2011
2	Green Technology Financing Scheme (GTFS)	2010
3	Renewable Energy Policy and Action Plan	2010
4	Malaysian Biofuel Industry Act 2007	2008
5	National Biofuel Policy of Malaysia (NBP 2006)	2006

### References to sustainable energy in Nationally Determined Contribution (NDC)

	Conditional	Unconditional	unit
- <b>Renewable energy</b>			
- electricity			
- transport			
- heating/cooling			
- Energy efficiency			

## ENERGY AND EMISSIONS

### Energy-related CO<sub>2</sub> emissions by sector

### Elec. & heat generation CO<sub>2</sub> emissions in 2017

### Avoided emissions from renewable power

### Reduction in power emissions due to RE in 2017

Avoided emissions based on fossil fuel mix used for power

Reduction is RE Avoided divided by sum of avoided and emitted

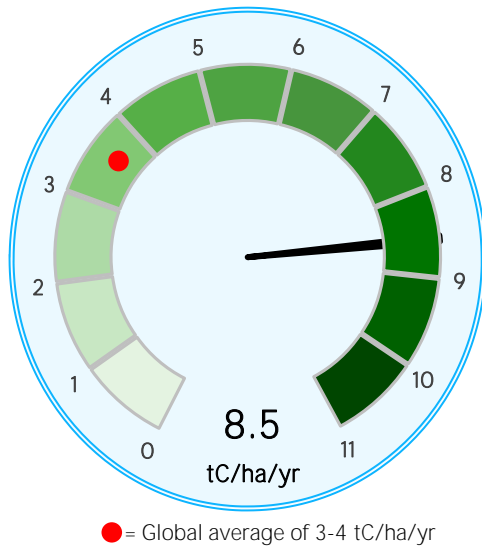

Distribution of solar potential

Distribution of wind potential

Biomass potential: net primary production

Indicators of renewable resource potential

**Solar PV:** Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

**Onshore wind:** Potential wind power density ( $W/m^2$ ) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

**Biomass:** Net primary production (NPP) is the amount of carbon fixed by plants and accumulated as biomass each year. It is a basic measure of biomass productivity. The chart shows the average NPP in the country (tC/ha/yr), compared to the global average NPP of 3-4 tonnes of carbon per year.

**Sources:** IRENA statistics, plus data from the following sources: UN SDG Indicators Database (original sources: WHO; World Bank; IEA; IRENA; and UNSD); UNSD Energy Balances; UN COMTRADE; World Bank World Development Indicators; EDGAR; REN21 Global Status Report; IEA-IRENA Joint Policies and Measures Database; IRENA Global Atlas; and World Bank Global Solar Atlas and Global Wind Atlas.

**Additional notes:** Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. The value of energy trade has been defined as including all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation has been calculated as annual generation divided by capacity x 8,760. Avoided emissions from renewable power have been calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries and years where no fossil fuel generation occurs, an average fossil fuel emission factor has been used to calculate the avoided emissions.

This note has been produced to provide policy makers with a brief overview of developments in renewable energy in a country. The IRENA statistics team would welcome comments and feedback on its structure and content, which can be sent to [statistics@irena.org](mailto:statistics@irena.org).
