

SUSTAINABLE DEVELOPMENT GOAL 7: ENERGY INDICATORS (2017)

Renewable energy (% of TFEC)	3.6	Access to electricity (% of population)	85.9
Energy efficiency (MJ per \$1 of GDP)	5.9	Access to clean cooking (% of population)	48
Public flows renewables (2017 USD M)	77.4	Per capita renewable capacity (W/person)	57.8

TOTAL PRIMARY ENERGY SUPPLY (TPES)

TPES	2012	2017
Non-renewable (TJ)	394 409	388 846
Renewable (TJ)	5 941	7 454
Total (TJ)	400 350	396 300
Renewable share (%)	1	2

Growth in TPES	2012-17	2016-17
Non-renewable (%)	-1.4	+34.9
Renewable (%)	+25.5	+11.7
Total (%)	-1.0	+34.4

Primary energy trade	2012	2017
Imports (TJ)	50 585	60 815
Exports (TJ)	454 514	850 967
Net trade (TJ)	403 929	790 152
Imports (% of supply)	13	15
Exports (% of production)	58	65
Energy self-sufficiency (%)	195	331
Net trade (USD million)	n.a.	+1 677
Net trade (% of GDP)	n.a.	+14.7

Total primary energy supply in 2017

Renewable energy supply in 2017

RENEWABLE ENERGY CONSUMPTION

Consumption by source	2012	2017
Electricity (TJ)	349	1 706
Heat (TJ)	0	0
Bioenergy (TJ)	5 481	5 481
Solar + geothermal (TJ)	0	0
Total (TJ)	5 830	7 187
Electricity share (%)	6	24

Consumption growth	2012-17	2016-17
Renewable electricity (%)	+388.1	+80.6
Other renewables (%)	0.0	0.0
Total (%)	+23.3	+11.8

Consumption by sector	2012	2017
Industry (TJ)	217	1 059
Transport (TJ)	15	71
Households (TJ)	5 565	5 890
Other (TJ)	34	167
Renewable share of TFEC		3.6

Renewable energy consumption in 2017

ELECTRICITY CAPACITY AND GENERATION

Capacity in 2019	MW	%
Non-renewable	1 200	81
Renewable	276	19
Hydro/marine	31	2
Solar	89	6
Wind	156	11
Bioenergy	0	0
Geothermal	0	0
Total	1 476	100

Capacity change (%)	2014-19	2018-19
Non-renewable	+ 13	+ 7.0
Renewable	+ 226	+ 9.9
Hydro/marine	+ 7	- 0.6
Solar	+ 1 678	+ 38.9
Wind	+ 208	0.0
Bioenergy	0	0.0
Geothermal	0	0.0
Total	+ 29	+ 7.5

Net capacity change in 2019 (MW)

Generation in 2018	GWh	%
Non-renewable	6 156	93
Renewable	480	7
Hydro and marine	81	1
Solar	59	1
Wind	340	5
Bioenergy	0	0
Geothermal	0	0
Total	6 636	100

Per capita electricity generation (kWh)

Renewable capacity in 2019

Net capacity change (MW)

Capacity utilisation in 2018 (%)

Renewable generation (GWh)

TARGETS, POLICIES AND MEASURES

Most immediate clean energy targets & NDCs

	year	target	unit
Renewable energy:	2050	100	%
Renewable electricity:	2020	20	%
Renewable capacity:			
Renewable transport:			
Liquid Biofuel blending mandate:			
Other transport targets:			
Renewable heating/cooling:			
Renewable Hydropower	2030	675	MW (additional)
Off-grid renewable technologies:			
Energy efficiency (Energy):			
Energy efficiency (Electricity):			

Latest policies, programmes and legislation

- transport			
- heating/cooling			
- Energy efficiency			

ENERGY AND EMISSIONS

RENEWABLE RESOURCE POTENTIAL

Biomass potential: net primary production

Indicators of renewable resource potential

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

Onshore wind: Potential wind power density (W/m²) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

Biomass: Net primary production (NPP) is the amount of carbon fixed by plants and accumulated as biomass each year. It is a basic measure of biomass productivity. The chart shows the average NPP in the country (tC/ha/yr), compared to the global average NPP of 3-4 tonnes of carbon per year.

Sources: IRENA statistics, plus data from the following sources: UN SDG Database (original sources: WHO; World Bank; IEA; IRENA; and UNSD); UN World Population Prospects; UNSD Energy Balances; UN COMTRADE; World Bank World Development Indicators; EDGAR; REN21 Global Status Report; IEA-IRENA Joint Policies and Measures Database; IRENA Global Atlas; and World Bank Global Solar Atlas and Global Wind Atlas.

Additional notes: Capacity per capita and public investments SDGs only apply to developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided emissions from renewable power is calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries and years where no fossil fuel generation occurs, an average fossil fuel emission factor has been used to calculate the avoided emissions.

These profiles have been produced to provide an overview of developments in renewable energy in different countries and areas. The IRENA statistics team would welcome comments and feedback on its structure and content, which can be sent to statistics@irena.org.
