## Sustainable Development Goal 7.2: Energy Indicators (2016)

Renewable energy (% of TFEC)	31.9	Access to electricity (% of population)	100.0
Energy efficiency (MJ per \$1 of GDP)	3.9	Access to clean cooking (% of population)	92

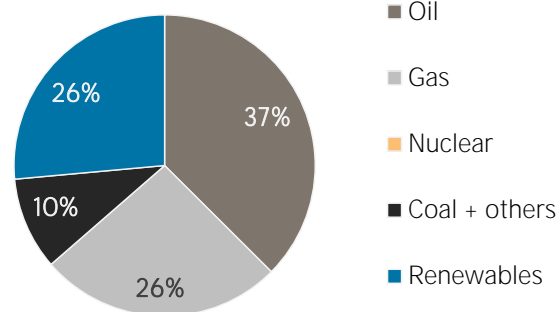

### TOTAL PRIMARY ENERGY SUPPLY (TPES)

TPES	2011	2016
Non-renewable (TJ)	298 101	255 731
Renewable (TJ)	83 097	91 954
Total (TJ)	381 198	347 685
Renewable share (%)	22	26

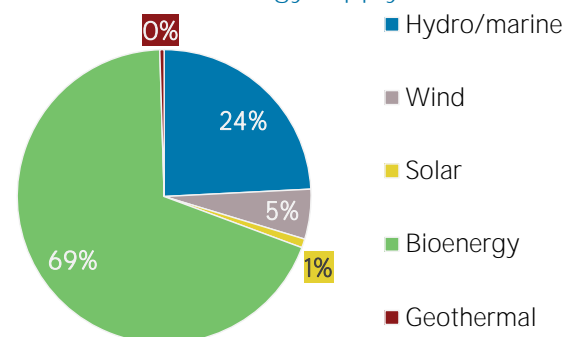

Growth in TPES	2011-16	2015-16
Non-renewable (%)	-14.2	+1.6
Renewable (%)	+10.7	-8.3
Total (%)	-8.8	-1.3

Primary energy trade	2011	2016
Imports (TJ)	300 887	314 088
Exports (TJ)	108 824	140 315
Net trade (TJ)	- 192 063	- 173 773
Imports (% of supply)	79	90
Exports (% of production)	57	78
Energy self-sufficiency (%)	50	52
Net trade (USD million)	- 3 338	- 1 392
Net trade (% of GDP)	-5.4	-2.7

### Total primary energy supply in 2016

### Renewable energy supply in 2016

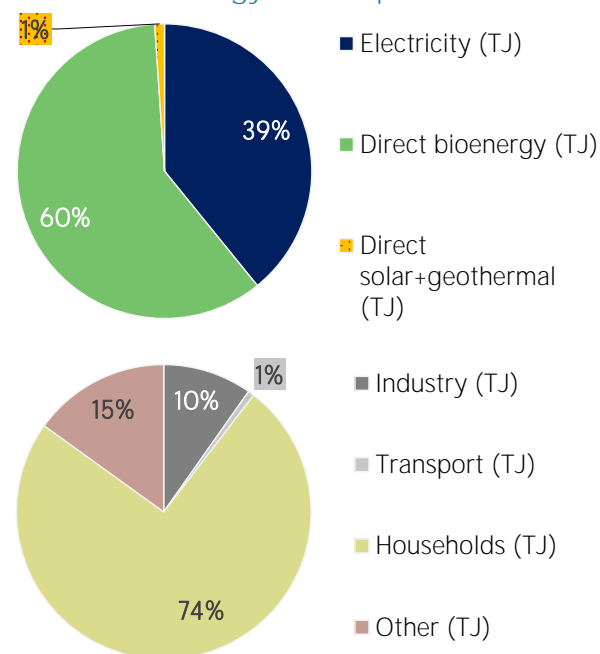

### RENEWABLE ENERGY CONSUMPTION

Consumption by source	2011	2016
Electricity (TJ)	26 566	31 683
Direct bioenergy (TJ)	50 666	48 371
Direct solar+geothermal (TJ)	541	863
<b>Total (TJ)</b>	<b>77 773</b>	<b>80 917</b>
Electricity share (%)	34	39

Consumption growth	2011-16	2015-16
Renewable electricity (%)	+19.3	-21.5
Other renewables (%)	-4.1	-4.7
<b>Total (%)</b>	<b>+3.9</b>	<b>-12.1</b>

Consumption by sector	2011	2016
Industry (TJ)	7 505	7 911
Transport (TJ)	605	557
Households (TJ)	59 714	60 258
Other (TJ)	9 949	12 191
Renewable share of TFEC	27.2	31.9

### Renewable energy consumption in 2016

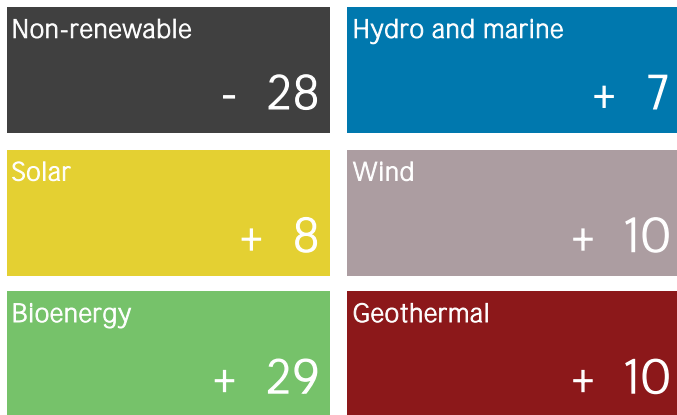

## ELECTRICITY CAPACITY AND GENERATION

Capacity in 2018	MW	%
<b>Non-renewable</b>	<b>2 027</b>	<b>40</b>
<b>Renewable</b>	<b>2 979</b>	<b>60</b>
Hydro/marine	2 200	44
Solar	68	1
Wind	586	12
Bioenergy	115	2
Geothermal	10	0
<b>Total</b>	<b>5 006</b>	<b>100</b>

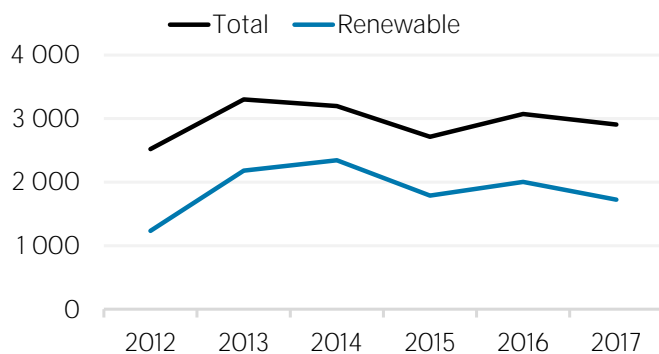

Capacity change (%)	2013-18	2017-18
<b>Non-renewable</b>	<b>+ 11</b>	<b>- 1.4</b>
<b>Renewable</b>	<b>+ 20</b>	<b>+ 2.2</b>
Hydro/marine	+ 1	+ 0.3
Solar	+ 256	+ 12.8
Wind	+ 131	+ 1.8
Bioenergy	+ 391	+ 33.3
Geothermal	0	0.0
<b>Total</b>	<b>+ 17</b>	<b>+ 0.7</b>

### Net capacity change in 2018 (MW)

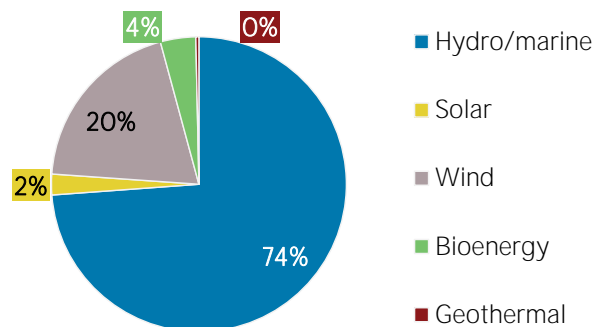

Generation in 2017	GWh	%
<b>Non-renewable</b>	<b>4 868</b>	<b>41</b>
<b>Renewable</b>	<b>7 116</b>	<b>59</b>
Hydro and marine	5 307	44
Solar	79	1
Wind	1 204	10
Bioenergy	526	4
Geothermal	0	0
<b>Total</b>	<b>11 984</b>	<b>100</b>

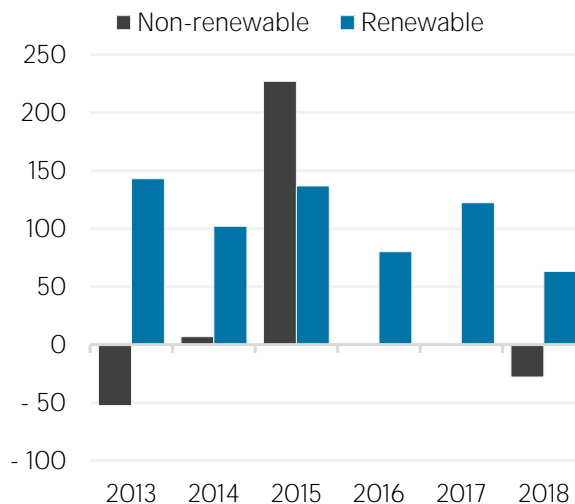

### Per capita electricity generation (kWh)

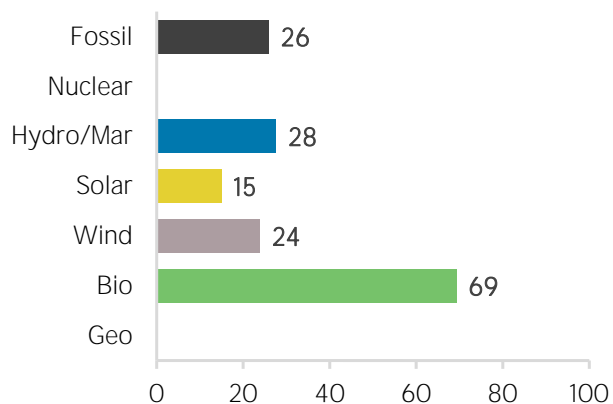

### Renewable capacity in 2018

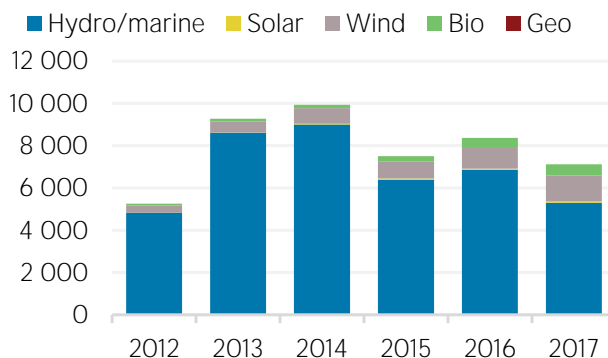

### Net capacity change (MW)

### Capacity utilisation in 2017 (%)

### Renewable generation (GWh)

## TARGETS, POLICIES AND MEASURES

### Most immediate clean energy targets & NDCs

	year	target	unit
<b>Renewable energy:</b>	2020	20	%
Renewable electricity:	2020	39	%
Renewable capacity:			
Renewable transport:	2020	10	%
Liquid Biofuel blending mandate:			
Other transport targets:			
Renewable heating/cooling:	2020	20	%
Renewable Hydropower			
Off-grid renewable technologies:			
Energy efficiency (Energy):			
Energy efficiency (Electricity):			

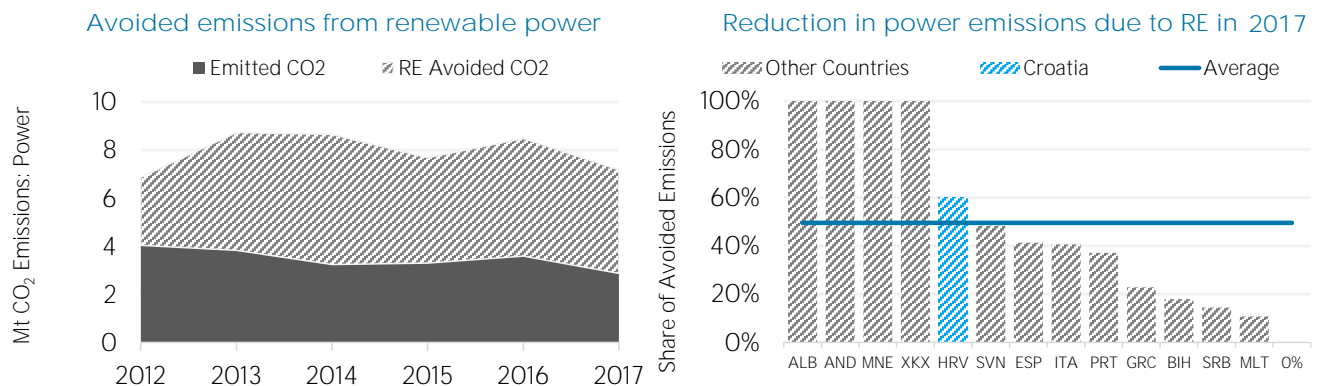

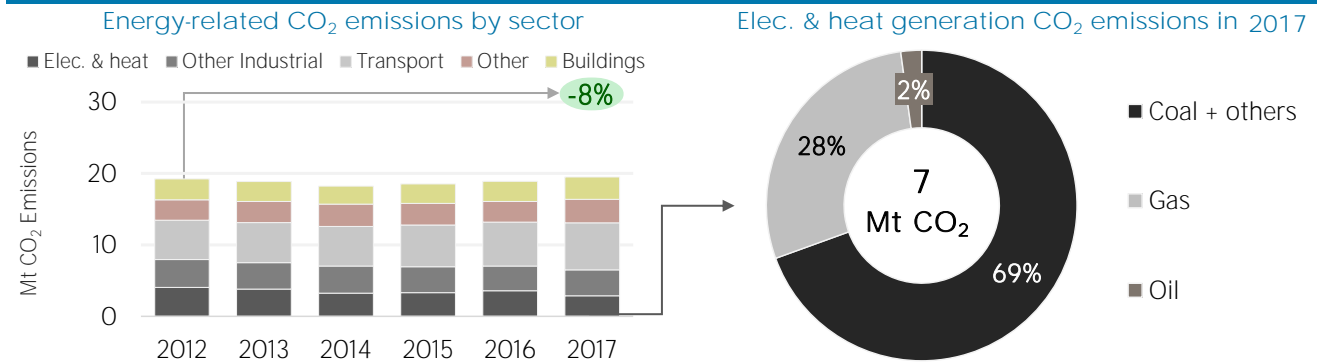

### Latest policies, programmes and legislation

1 Act on Renewable Energy Sources and High-efficiency Cogeneration	2016
2 Regulation on Incentive Fees to Promote Electricity Production from RES and cogeneration	2013
3 Energy Act 2012	2012
4 Ordinance on the Use of Renewable Energy Sources and Cogeneration 2012	2012
5 National Energy Strategy 2009 – 2020	2009

### References to sustainable energy in Nationally Determined Contribution (NDC)

- |                           | Conditional | Unconditional | unit |
|---------------------------|-------------|---------------|------|
| - <b>Renewable energy</b> |             |               |      |
| - electricity             |             |               |      |

| - heating/cooling         |             |               |      |
| - Energy efficiency       |             |               |      |

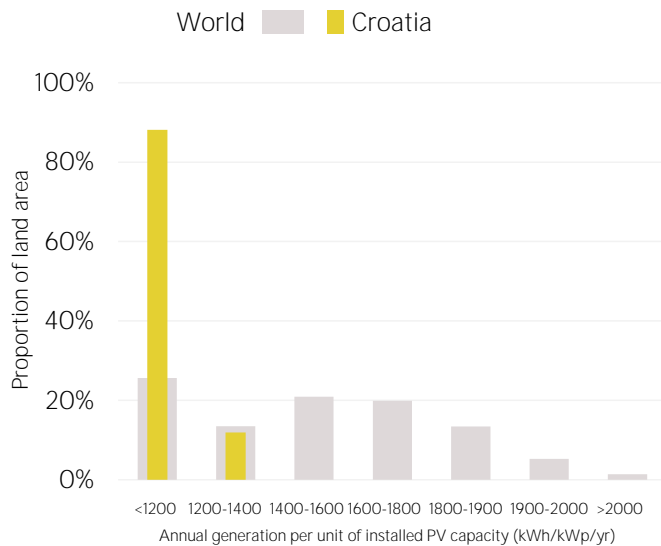

## ENERGY AND EMISSIONS

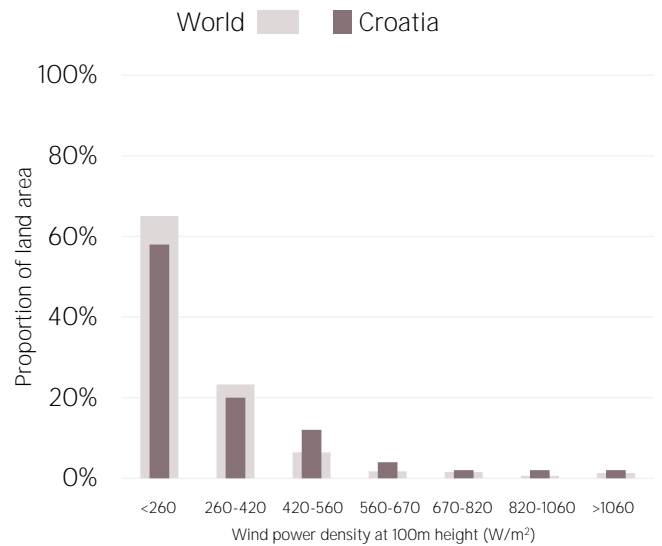

Avoided emissions based on fossil fuel mix used for power

Reduction is RE Avoided divided by sum of avoided and emitted

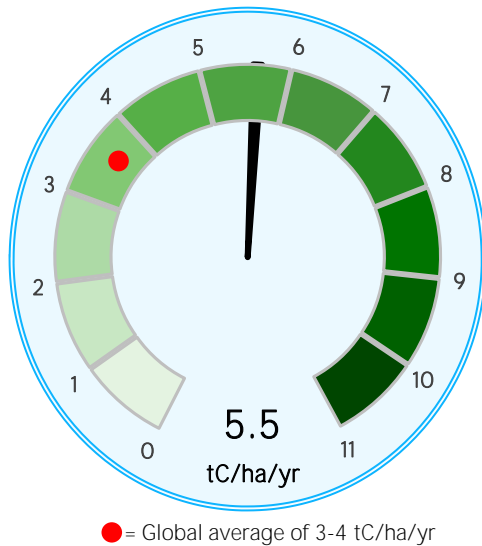

Distribution of solar potential

Distribution of wind potential

Biomass potential: net primary production

Indicators of renewable resource potential

**Solar PV:** Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

**Onshore wind:** Potential wind power density ( $W/m^2$ ) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

**Biomass:** Net primary production (NPP) is the amount of carbon fixed by plants and accumulated as biomass each year. It is a basic measure of biomass productivity. The chart shows the average NPP in the country (tC/ha/yr), compared to the global average NPP of 3-4 tonnes of carbon per year.

**Sources:** IRENA statistics, plus data from the following sources: UN SDG Indicators Database (original sources: WHO; World Bank; IEA; IRENA; and UNSD); UNSD Energy Balances; UN COMTRADE; World Bank World Development Indicators; EDGAR; REN21 Global Status Report; IEA-IRENA Joint Policies and Measures Database; IRENA Global Atlas; and World Bank Global Solar Atlas and Global Wind Atlas.

**Additional notes:** Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. The value of energy trade has been defined as including all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation has been calculated as annual generation divided by capacity x 8,760. Avoided emissions from renewable power have been calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries and years where no fossil fuel generation occurs, an average fossil fuel emission factor has been used to calculate the avoided emissions.

This note has been produced to provide policy makers with a brief overview of developments in renewable energy in a country. The IRENA statistics team would welcome comments and feedback on its structure and content, which can be sent to [statistics@irena.org](mailto:statistics@irena.org).
