Sustainable Development Goal 7.2: Energy Indicators (2016)

Renewable energy (% of TFEC)	9.8	Access to electricity (% of population)	100.0
Energy efficiency (MJ per \$1 of GDP)	3.4	Access to clean cooking (% of population)	>95

TOTAL PRIMARY ENERGY SUPPLY (TPES)

TPES	2011	2016
Non-renewable (TJ)	95 066	84 420
Renewable (TJ)	5 336	6 527
Total (TJ)	100 402	90 947
Renewable share (%)	5	7

Growth in TPES	2011-16	2015-16
Non-renewable (%)	-11.2	+6.9
Renewable (%)	+22.3	+5.9
Total (%)	-9.4	+6.8

Primary energy trade	2011	2016
Imports (TJ)	112 083	110 900
Exports (TJ)	0	706
Net trade (TJ)	- 112 083	- 110 194
Imports (% of supply)	112	122
Exports (% of production)	0	13
Energy self-sufficiency (%)	4	6
Net trade (USD million)	- 1 856	- 700
Net trade (% of GDP)	-6.7	-3.4

Total primary energy supply in 2016

Renewable energy supply in 2016

RENEWABLE ENERGY CONSUMPTION

Consumption by source	2011	2016
Electricity (TJ)	851	1 411
Direct bioenergy (TJ)	1 634	1 778
Direct solar+geothermal (TJ)	2 669	2 952
Total (TJ)	5 154	6 141
Electricity share (%)	17	23

Consumption growth	2011-16	2015-16
Renewable electricity (%)	+65.8	+2.2
Other renewables (%)	+9.5	+6.4
Total (%)	+18.9	+5.4

Consumption by sector	2011	2016
Industry (TJ)	401	730
Transport (TJ)	662	368
Households (TJ)	2 886	3 462
Other (TJ)	1 205	1 580
Renewable share of TFEC	7.4	9.8

Renewable energy consumption in 2016

ELECTRICITY CAPACITY AND GENERATION

Capacity in 2018	MW	%
Non-renewable	1 505	84
Renewable	289	16
Hydro/marine	0	0
Solar	118	7
Wind	158	9
Bioenergy	13	1
Geothermal	0	0
Total	1 794	100

Capacity change (%)	2013-18	2017-18
Non-renewable	- 0	- 0.2
Renewable	+ 50	+ 4.1
Hydro/marine	0	0.0
Solar	+ 239	+ 7.7
Wind	+ 7	0.0
Bioenergy	+ 27	+ 30.4
Geothermal	0	0.0
Total	+ 6	+ 0.5

Net capacity change in 2018 (MW)

Generation in 2017	GWh	%
Non-renewable	4 569	91
Renewable	435	9
Hydro and marine	0	0
Solar	172	3
Wind	211	4
Bioenergy	52	1
Geothermal	0	0
Total	5 004	100

Per capita electricity generation (kWh)

Renewable capacity in 2018

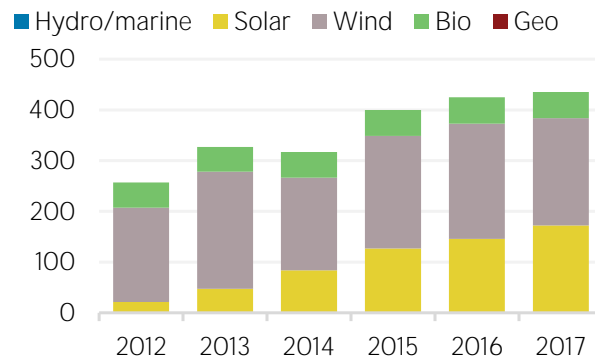

Net capacity change (MW)

Capacity utilisation in 2017 (%)

Renewable generation (GWh)

Most immediate clean energy targets & NDCs

	year	target	unit
Renewable energy:	2020	13	%
Renewable electricity:	2020	16	%
Renewable capacity:			
Renewable transport:	2020	5	%
Liquid Biofuel blending mandate:			
Other transport targets:			
Renewable heating/cooling:	2020	24	%
Renewable Hydropower			
Off-grid renewable technologies:			

Energy efficiency (Energy):

Energy efficiency (Electricity):

Latest policies, programmes and legislation

1	Guidelines for the simplification of the permitting procedures for small decentralised and/or distributed electricity production	2017
2	Support Scheme for the Production of Electricity from Renewable Energy Sources for self-consumption 2017	2017
3	Promotion of nearly zero energy buildings	2014
4	Use of Renewable Energy Sources in Developments	2014
5	Grand Schemes for Energy Efficiency and Renewable Energy Sources	2012

- Conditional Unconditional unit

ENERGY AND EMISSIONS

Avoided emissions based on fossil fuel mix used for power

Reduction is RE Avoided divided by sum of avoided and emitted

Distribution of solar potential

Distribution of wind potential

Biomass potential: net primary production

Indicators of renewable resource potential

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

Onshore wind: Potential wind power density (W/m^2) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

Biomass: Net primary production (NPP) is the amount of carbon fixed by plants and accumulated as biomass each year. It is a basic measure of biomass productivity. The chart shows the average NPP in the country (tC/ha/yr), compared to the global average NPP of 3-4 tonnes of carbon per year.

Sources: IRENA statistics, plus data from the following sources: UN SDG Indicators Database (original sources: WHO; World Bank; IEA; IRENA; and UNSD); UNSD Energy Balances; UN COMTRADE; World Bank World Development Indicators; EDGAR; REN21 Global Status Report; IEA-IRENA Joint Policies and Measures Database; IRENA Global Atlas; and World Bank Global Solar Atlas and Global Wind Atlas.

Additional notes: Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. The value of energy trade has been defined as including all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation has been calculated as annual generation divided by capacity x 8,760. Avoided emissions from renewable power have been calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries and years where no fossil fuel generation occurs, an average fossil fuel emission factor has been used to calculate the avoided emissions.

This note has been produced to provide policy makers with a brief overview of developments in renewable energy in a country. The IRENA statistics team would welcome comments and feedback on its structure and content, which can be sent to statistics@irena.org.
