

# Estonia

## Sustainable Development Goal 7.2: Energy Indicators (2016)

Renewable energy (% of TFEC)	26.6	Access to electricity (% of population)	100.0
Energy efficiency (MJ per \$1 of GDP)	6.3	Access to clean cooking (% of population)	>95

### TOTAL PRIMARY ENERGY SUPPLY (TPES)

TPES	2011	2016
Non-renewable (TJ)	203 953	192 686
Renewable (TJ)	34 086	41 476
Total (TJ)	238 039	234 162
Renewable share (%)	14	18
Growth in TPES		
	2011-16	2015-16
Non-renewable (%)	-5.5	-0.4
Renewable (%)	+21.7	+7.8
Total (%)	-1.6	+1.0
Primary energy trade		
	2011	2016
Imports (TJ)	78 266	110 242
Exports (TJ)	42 055	86 647
Net trade (TJ)	- 36 211	- 23 595
Imports (% of supply)	33	47
Exports (% of production)	20	44
Energy self-sufficiency (%)	89	84
Net trade (USD million)	- 348	- 305
Net trade (% of GDP)	-1.5	-1.3

### Total primary energy supply in 2016

### Renewable energy supply in 2016

### RENEWABLE ENERGY CONSUMPTION

Consumption by source	2011	2016
Electricity (TJ)	2 836	3 889
Direct bioenergy (TJ)	20 993	17 491
Direct solar+geothermal (TJ)	0	0
<b>Total (TJ)</b>	<b>23 829</b>	<b>21 380</b>
Electricity share (%)	12	18
Consumption growth		
	2011-16	2015-16
Renewable electricity (%)	+37.1	+7.3
Other renewables (%)	-16.7	-14.8
<b>Total (%)</b>	<b>-10.3</b>	<b>-11.5</b>
Consumption by sector		
	2011	2016
Industry (TJ)	5 458	5 827
Transport (TJ)	195	133
Households (TJ)	16 091	13 147
Other (TJ)	2 086	2 273
Renewable share of TFEC	25.0	26.6

### Renewable energy consumption in 2016

## ELECTRICITY CAPACITY AND GENERATION

Capacity in 2018	MW	%
<b>Non-renewable</b>	<b>2 211</b>	<b>78</b>
<b>Renewable</b>	<b>609</b>	<b>22</b>
Hydro/marine	7	0
Solar	32	1
Wind	310	11
Bioenergy	259	9
Geothermal	0	0
<b>Total</b>	<b>2 819</b>	<b>100</b>

Capacity change (%)	2013-18	2017-18
<b>Non-renewable</b>	<b>- 8</b>	<b>+ 14.7</b>
<b>Renewable</b>	<b>+ 17</b>	<b>- 1.1</b>
Hydro/marine	- 9	0.0
Solar	+ 2 027	+ 112.7
Wind	+ 25	- 0.6
Bioenergy	- 1	- 7.7
Geothermal	0	0.0
<b>Total</b>	<b>- 3</b>	<b>+ 10.9</b>

### Net capacity change in 2018 (MW)

Generation in 2017	GWh	%
<b>Non-renewable</b>	<b>11 116</b>	<b>86</b>
<b>Renewable</b>	<b>1 801</b>	<b>14</b>
Hydro and marine	26	0
Solar	14	0
Wind	723	6
Bioenergy	1 038	8
Geothermal	0	0
<b>Total</b>	<b>12 917</b>	<b>100</b>

### Per capita electricity generation (kWh)

### Renewable capacity in 2018

### Net capacity change (MW)

### Capacity utilisation in 2017 (%)

### Renewable generation (GWh)

## TARGETS, POLICIES AND MEASURES

### Most immediate clean energy targets & NDCs

	year	target	unit
<b>Renewable energy:</b>	2020	25	%
Renewable electricity:	2020	5	%
Renewable capacity:			
Renewable transport:	2020	3	%
Liquid Biofuel blending mandate:			
Other transport targets:			
Renewable heating/cooling:	2020	18	%
Renewable Hydropower			
Off-grid renewable technologies:			

Energy efficiency (Energy):

Energy efficiency (Electricity):

### Latest policies, programmes and legislation

1	Energy Sector Organisation Act (ENKS)	2017
2	National Development Plan of the Energy Sector Until 2030 (ENMAK 2030)	2016
3	National Renewable Energy Action Plan (NREAP)	2010
4	National Development Plan of the Energy Sector until 2020	2009
5	Wider use of renewable energy sources in energy production	2009

### References to sustainable energy in Nationally Determined Contribution (NDC)

#### - Renewable energy

- electricity
- transport
- heating/cooling
- Energy efficiency

Conditional      Unconditional      unit

## ENERGY AND EMISSIONS

### Energy-related CO<sub>2</sub> emissions by sector

### Elec. & heat generation CO<sub>2</sub> emissions in 2017

### Avoided emissions from renewable power

### Reduction in power emissions due to RE in 2017

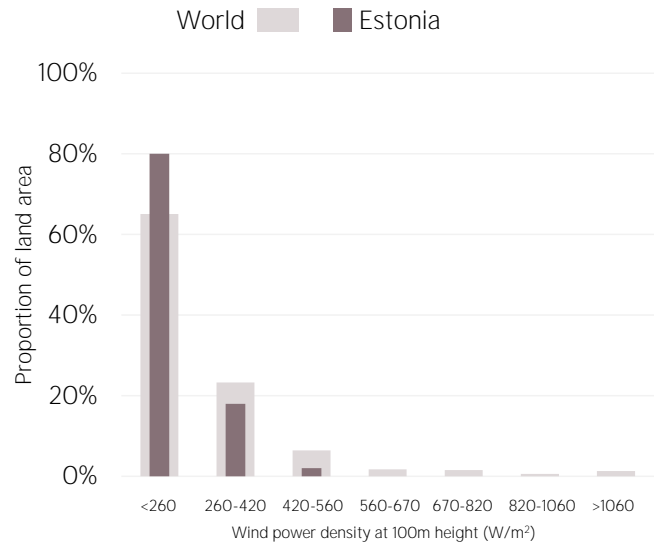

Avoided emissions based on fossil fuel mix used for power

Reduction is RE Avoided divided by sum of avoided and emitted

Distribution of solar potential

Distribution of wind potential

Biomass potential: net primary production

Indicators of renewable resource potential

**Solar PV:** Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

**Onshore wind:** Potential wind power density ( $W/m^2$ ) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

**Biomass:** Net primary production (NPP) is the amount of carbon fixed by plants and accumulated as biomass each year. It is a basic measure of biomass productivity. The chart shows the average NPP in the country (tC/ha/yr), compared to the global average NPP of 3-4 tonnes of carbon per year.

**Sources:** IRENA statistics, plus data from the following sources: UN SDG Indicators Database (original sources: WHO; World Bank; IEA; IRENA; and UNSD); UNSD Energy Balances; UN COMTRADE; World Bank World Development Indicators; EDGAR; REN21 Global Status Report; IEA-IRENA Joint Policies and Measures Database; IRENA Global Atlas; and World Bank Global Solar Atlas and Global Wind Atlas.

**Additional notes:** Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. The value of energy trade has been defined as including all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation has been calculated as annual generation divided by capacity x 8,760. Avoided emissions from renewable power have been calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries and years where no fossil fuel generation occurs, an average fossil fuel emission factor has been used to calculate the avoided emissions.

This note has been produced to provide policy makers with a brief overview of developments in renewable energy in a country. The IRENA statistics team would welcome comments and feedback on its structure and content, which can be sent to [statistics@irena.org](mailto:statistics@irena.org).
